

## CASH FLOW PLANNING

Using information from other Farmfax programs like Dairy Prediction, Physical Planner, etc., this program does all the calculations, including interest on overdraft, to produce a neat printout of predicted cash flow. It will also analyse your previous years accounts, by entering the cash book balances and then producing the accounts.

## CASH ACCOUNTS

Farmfax believe that the majority of farmers prefer to keep their accounts on a cash basis only and this is what this program does. It allows for opening and closing balances to be entered so that complete accounts can be produced.

## FERTBUY

With this program you will be able to compare all the offers you receive for different fertilisers.

Just enter the prices, paydates and fertiliser analysis and Fertbuy will help you choose the right and most economic mix of fertiliser for your NPK requirements.

## DAIRY MANAGEMENT

This Farmfax program is the direct equivalent of the many commercial dairy costings schemes available, and allows complete financial costings to produce a gross margin.

## INDIVIDUAL DAIRY

This program allows you to record all the breeding and performance details for each individual cow in the herd and produces individual cow feeding requirements.

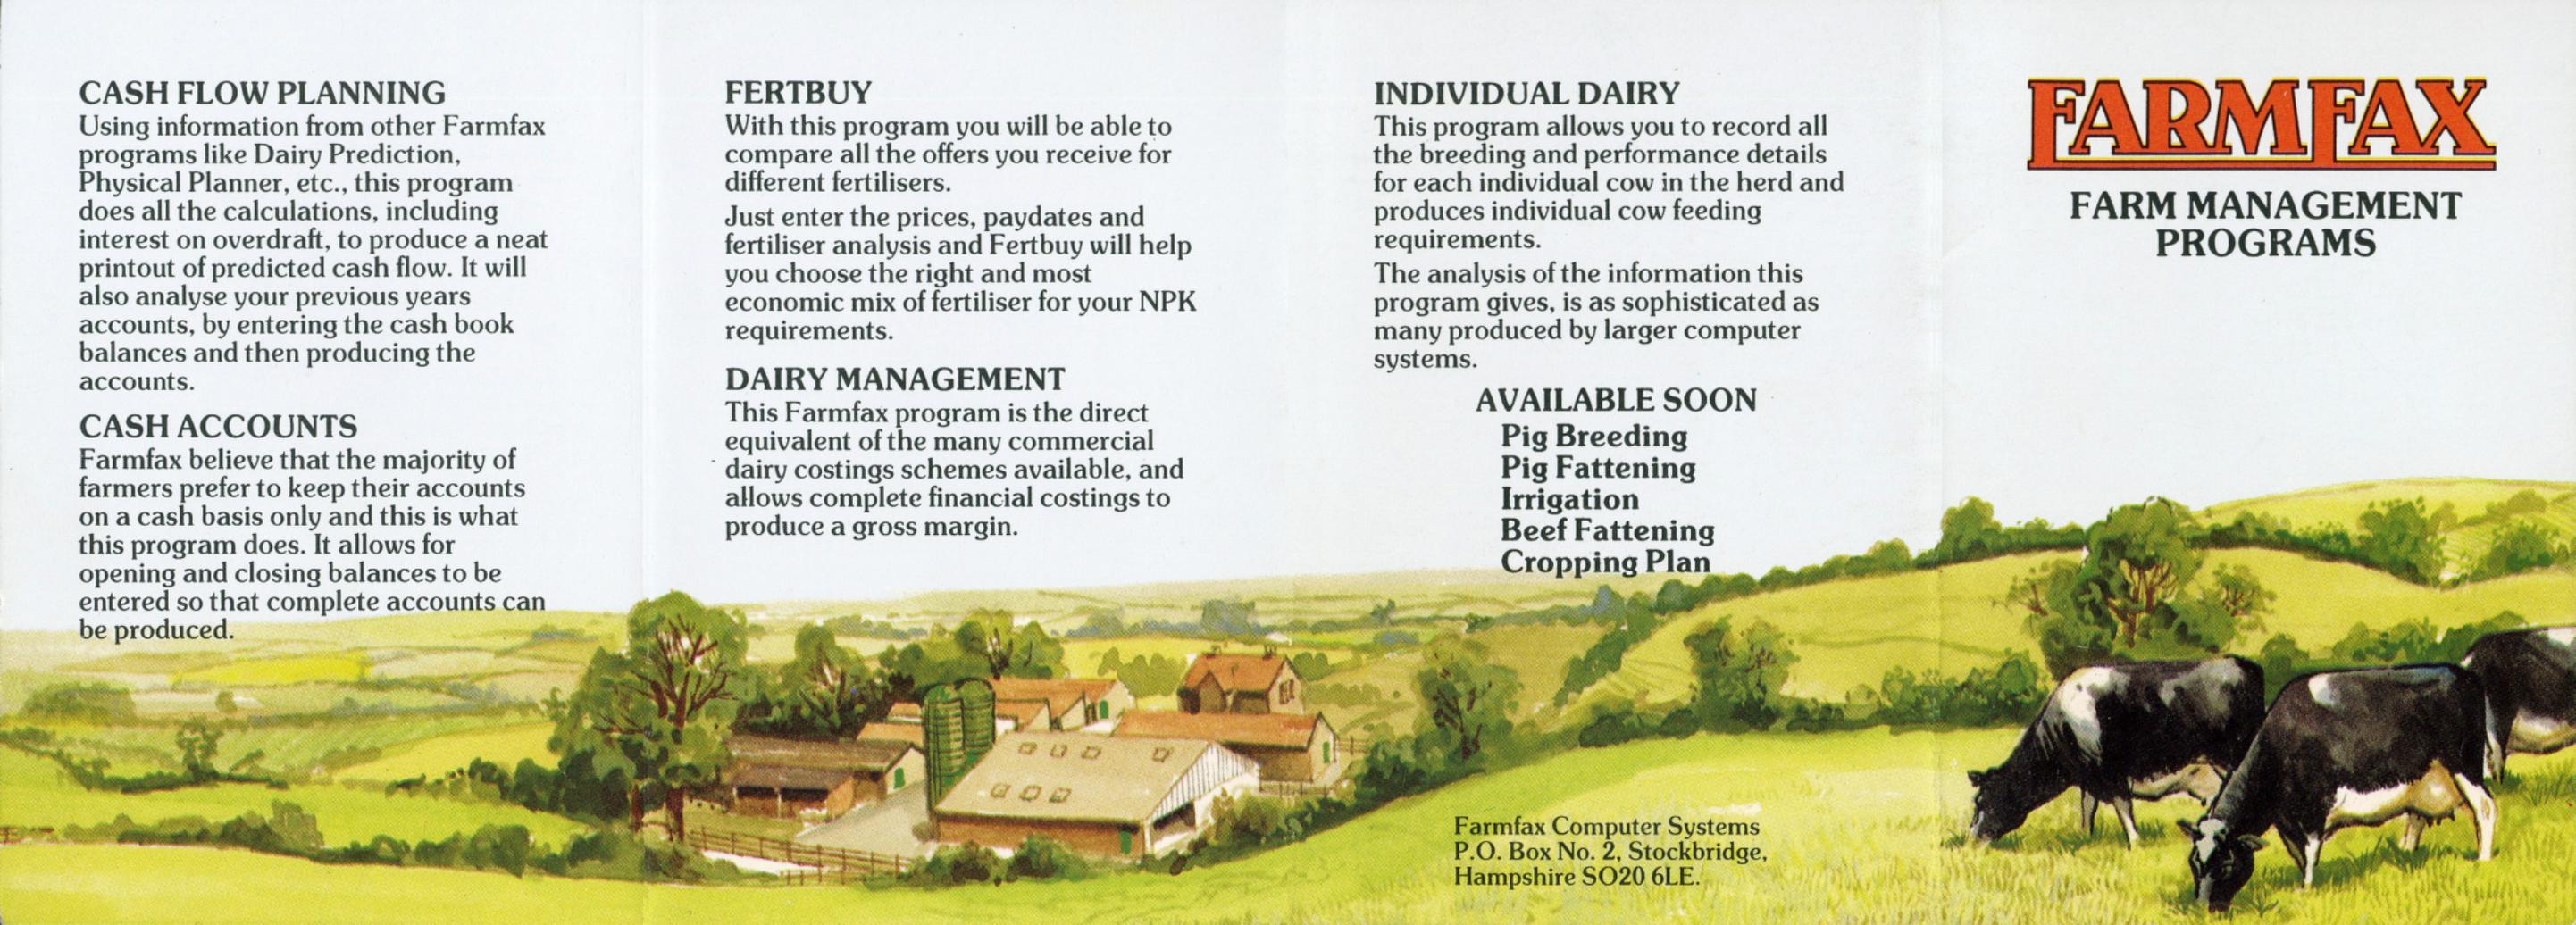

The analysis of the information this program gives, is as sophisticated as many produced by larger computer systems.

## FARM MANAGEMENT PROGRAMS

Farmfax Computer Systems  
P.O. Box No. 2, Stockbridge,  
Hampshire SO20 6LE.

## **TRAINER**

This is the program to teach you how to use the Farmfax Dragon. You'll find it very simple to follow and you'll soon be ready for bigger things, like some of the other programs shown in this leaflet.

## **CULLCOW**

This program will help you make better decisions in culling cows in the dairy herd. You'll be surprised how often you have sold at the wrong time!

## **BUYSELL**

A useful program to help you gain confidence in your Farmfax Dragon. It will help you evaluate different offers for a lot of cereals and takes into account, interest rates, storage costs and if you wish, opportunity costs as well.

## **DAIRY PREDICTION**

This program will predict your dairy herd performance in terms of yields and income etc. It monitors such things as service and calving dates and provides more information than most other similar program available.

## **PHYSICAL PLANNER**

With this program you will be able to plan the farm, crop by crop so that you can produce all your purchasing requirements for seed, fertiliser, sprays etc. in terms of quantity and cost. Any minor variation you might want to make to any of the inputs is reflected all the way through the calculations which gives you faster and more accurate planning.

## **FIELD RECORDS**

This program enables you to record all inputs and outputs, field by field, year by year and compares these with your plan.

## **SPRAYS**

Farmfax, in association with the Ministry of Agriculture Agronomists, have produced this important program to help you improve your choice of herbicide sprays. This is a revolutionary use for on-farm computers and Farmfax lead the way.

## **RATION FORMULATION**

You can enter 10 different feeds, together with their analysis and prices and this program will compare them for value for money. It will also calculate the requirements for a desired performance level for milk production, milk quality, bodyweight gain, etc and give you precise feeding levels.
